Raisa Nusrat

Dhaka, Bangladesh | raisanusrat0@gmail.com | 2006132@eee.buet.ac.bd | raisa-nusrat.github.io
github.com/raisa-nusrat | linkedin.com/in/raisa-nusrat-4050a0366

Research Interests

Deep learning for medical imaging; facial analysis for neurological disorder detection (stroke, ALS, Parkinson's disease); multimodal fusion of imaging and clinical data; explainable and generalizable healthcare AI; bio-inspired robotics and autonomous systems.

Education

B.Sc. in Electrical and Electronic Engineering 2020 – June 2026

Bangladesh University of Engineering and Technology (BUET), Dhaka CGPA: 3.28/4.00

Last two semesters: 3.56 and 3.83/4.00; A+ in Artificial Intelligence and Machine Learning, and in Robotics and Automation

Thesis: A Multimodal Deep Learning Framework for Stroke Detection from Facial Asymmetry and Clinical Data with Explainable AI and External Validation — Supervisor: Dr. Mohammad Faisal, Professor, EEE, BUET

Publications

Journal Articles

1. **R. Nusrat**, M. R. Rahman, I. J. Riya, and M. Faisal, "Age-Robust Stroke Detection and Paretic-Side Identification Using Nasolabial Fold Asymmetry and Clinical Data," *IEEE Journal of Biomedical and Health Informatics*, under review, 2026.
2. **R. Nusrat**, M. S. Raihan, S. M. R. Rahman, H. Saha, and S. S. Ahbab, "A Low-Cost Integrated Motorcycle Theft Detection and Monitoring System Using Arduino, ESP32-CAM, and GSM/GPS Technologies," *Journal of the Electrical and Electronic Engineering Division, Institution of Engineers, Bangladesh (IEB)*, accepted, 2026.

Conference Papers

3. **R. Nusrat**, "When Scale Flips the Answer: Corridor-Level Deep Reinforcement Learning for Traffic Signal Control on a Simulated Dhaka Arterial," *AABEA 2026 Biennial Convention*; abstract accepted for proceedings, full paper under review.
4. **R. Nusrat**, "Rare-Attack Blindness in Federated Intrusion Detection for the Internet of Medical Things," *14th International Conference on Electrical and Computer Engineering (ICECE 2026)*, Dhaka, under review.

Manuscripts in Preparation

5. **R. Nusrat** et al., "Differentiating stroke from ALS using facial-motion asymmetry on the Toronto NeuroFace dataset."
6. **R. Nusrat** et al., "Parkinson's disease detection using the PADS smartwatch dataset."
7. **R. Nusrat**, A. Hamim, M. Fahim, M. J. Hasan, and A. Hasan, "HIVE-R: Bio-inspired and visual odometry based drone for rescue operations in GPS-denied environments."

Research Experience

Undergraduate Thesis Research — Stroke Detection 2025 – 2026

Department of EEE, BUET | Supervisor: Dr. Mohammad Faisal

- Built a clinical dataset of 117 patients (71 stroke, 46 non-stroke) from hospital records, with facial images and 38 laboratory features.
- Designed a Siamese CNN (EfficientNet-B0) comparing left and right facial regions; image model AUC of 0.983.
- Fused image and clinical models; 80% accuracy and 88.9% sensitivity on 15 held-out external patients.
- Journal extension (under review, *IEEE JBHI*): expanded to 181 inpatients; nasolabial fold asymmetry detected stroke independently of age (AUC 0.748 in 53 age-matched pairs vs. 0.596 for a 28-variable clinical model) and identified the paretic side (AUC 0.908).

Clinical Study — Multimodal Stroke Detection (Facial Imaging and Blood Biomarkers) 2026 – Present

- Wrote the study protocol and obtained BUET Ethical Review Committee approval (Ref. BUET/ERC/2026/01).
- Supported by the Basic Research Grant, RISE, BUET.

Robotics Research — HIVE-R Autonomous Rescue Drone 2025 – Present

- Honeybee-inspired drone swarm for search and rescue in GPS-denied environments.
- Camera-IMU visual odometry (SLAM) on Pixhawk and Raspberry Pi; YOLOv8-Nano human detection with fuzzy augmentation for smoke, blur, and low light.

Independent Research — Deep Reinforcement Learning for Traffic Signal Control 2026

- Built a five-junction Dhaka corridor in SUMO and trained a shared-policy DQN; under saturation, cut arterial delay by 60% and cross-street delay by 41% versus fixed-time control.

Selected Projects

Multi-Modal Parkinson's Disease Detection EEE 402, AI & ML Lab

Detection from speech, gait, and handwriting with late fusion.

Autonomous Trash-Collecting Line-Following Robot EEE 318, Control Systems Lab

PID-controlled line follower with object detection and collection.

Motorcycle Theft Detection and Monitoring System Embedded Systems

Arduino and ESP32-CAM unit with PIN-locked ignition, live camera view, and GPS/SMS tracking; working prototype at about 3800 BDT.

Noise Cancellation Using Adaptive Filters EEE 312, DSP Lab

Compared LMS and RLS adaptive filters by SNR and mean squared error.

Microgrid Simulation with Intentional Islanding EEE 306, Power Systems Lab

Simulink model of a neighbourhood microgrid that islands from the grid during faults.

Teaching Experience

Mathematics Tutor (International) 2026 – Present

Teaching students in Australia on the Edexcel curriculum; personalized lesson plans and progress tracking.

Private Tutor (International) 2024 – 2025

One-on-one online tutoring for a Stony Brook University (USA) undergraduate in circuit analysis, signals and systems, and advanced calculus.

Content Developer and Academic Support, Udvash Academic & Admission Care 2022 – 2023

Wrote conceptual questions and parallel texts; provided real-time online Q&A support.

Private Tutor (National Curriculum) 2022 – Present

Physics and Mathematics for Classes 9–12 (SSC/HSC).

Industrial Training

Industrial Attachment, Bangladesh Television (BTV)

Satellite communication, high-power RF transmission, and studio broadcasting electronics; hands-on signal acquisition and hardware operation.

Awards

Champion, Integration Bee, organized by Tachyon.

Technical Skills

Programming:	Python, MATLAB, C/C++, LaTeX
Machine Learning:	PyTorch, scikit-learn, OpenCV, YOLOv8
Robotics:	Pixhawk (MAVLink), Raspberry Pi, IMU-based visual odometry, PID control
Design and Simulation:	MATLAB/Simulink, SUMO, PSpice, Proteus, Verilog, Quartus, AutoCAD
Hardware:	Arduino, ESP32-CAM, GPS/GSM modules

Test Scores

TOEFL iBT: scheduled 14 November 2026
